

Clients and builders can immerse themselves in the DIRTT Experience.

DIRTT
Build better.™

ABOUT THE PROJECT

This creative, collaborative and eye-catching Green Learning Center (GLC) lets clients and builders immerse themselves in the DIRTT Experience. The functioning office / display area demonstrates how various attributes can be applied to any space, while imbedded technology keeps digital business or entertainment applications protected but easily accessible. The space also speaks directly to how DIRTT's sustainable manufactured construction meets client needs and building industry challenges: quick installation and features such as modular DIRTT Power and Data and an unobtrusive Access Floor allow for maximum future flexibility.
