

## ABOUT THE PROJECT

This major hospital looked back and looked forward in selecting DIRTT headwalls and footwalls for 199 new private patient rooms between two buildings. Headwalls installed more than five years ago have been maintenance- and touchup-free – great news for the facilities team. Healthcare providers also wanted the flexibility

to easily incorporate as-yet unimagined technologies in rooms that range from medical/surgical patient rooms to bone marrow transplant and ICU spaces. Imbedded equipment rails and touch-enabled monitors support healthcare givers in providing high-quality care, while digital graphics behind Corning® Willow® Glass provide splashes of color and a welcoming touch for patients.

## SOLUTIONS

- Solid walls
- Imbedded technology
- Healthcare Optifiller

## FINISHES

- Enzo Approach
- Corning® Willow® Glass
- Back painted glass
- Chromacoat
- Thermofoil
- Custom Thermofoil to match countertop finishes
- Xorel fabric

## ARCHITECT/DESIGNER

Champlin Architecture

## DISTRIBUTION PARTNER

Revolution Interiors

## GENERAL CONTRACTOR

Danis Building Construction
