

FRESHDIRTT

GOVERNMENT | BATAVIA, IL

ISSUE #410

ABOUT THE PROJECT

How do you transform 16,163 square feet from vacant space to complete offices in just two weeks? The science and technology behind DIRTT was a perfect fit for these scientific laboratory offices. The power of ICE technology combined with careful planning ensured DIRTT integrated with the base building conditions. Anticipated on-site adjustments by the installer made for a precision fit around the steel beams. DIRTT custom millwork seamlessly integrates with third party pieces. Writable surfaces encourage collaboration for the next scientific discovery.

SOLUTIONS

- Barn and pivot doors
- Combination, glass clerestory, glass and solid walls
- DIRTT Accessories
- DIRTT Millwork
- DIRTT Power

FINISHES

- Anodized aluminum
